Bachelors in Computer Science

Iqra University
01/2025 - 11/2025
Karachi, Pakistan
CGPA: 3.14

Muhammad Irfan

Enthusiastic Developer

A driven and adaptable individual with a passion for innovation and problem-solving, looking for a thriving company with which we can reach new heights.

WORK EXPERIENCE

Internship

Information Technology Services
01/2026 - 03/2026 | Karachi, Pakistan

Front-End Development

- Built responsive user interfaces using Bootstrap and Tailwind CSS with clean and maintainable styling.
- Developed interactive features using JavaScript, including DOM manipulation and event handling.
- Implemented routing with React Router for smooth navigation in a multi-page application.

Trainee Software Engineer

Karachi, Pakistan

- Worked on multiple full-stack web development projects using React, Django, Next.js, Supabase, PHP, and SQL.
- Built and integrated frontend and backend functionality across projects, including APIs and data handling.
- Developed responsive, interactive interfaces and database-driven features using modern development practices.
- Worked with Next.js App Router, Supabase authentication/database, and SQL-based backends for feature development.

PROJECTS

Multi-Vendor E-Commerce Marketplace

Next.js + Supabase

- Built a multi-vendor marketplace where multiple shops sell through one platform, with separate customer, shop admin, and super admin roles.
- Implemented shop creation/approval workflow, product/category/variant/inventory management, cart, checkout, and order handling across multiple shops in a single checkout.
- Used Supabase authentication and Row Level Security (RLS) with a relational database, triggers, and RPCs to maintain data integrity and role-based permissions.

Food Website

React + Django

- Developed a food-related web application using React for the frontend and Django for the backend.
- Integrated frontend and backend functionality and worked with APIs and data handling.
- Built responsive and interactive web application features.

Hospital Management System

Next.js + Supabase

- Developed a Hospital Management System using Next.js and React, with Supabase for backend and database functionality.
- Worked on hospital-related modules, data management, and frontend-backend integration.
- Used Next.js App Router and modern React development practices.

E-Commerce Website

PHP + SQL

- Developed an e-commerce website using PHP with SQL/database integration.
- Implemented product and e-commerce functionality.
- Worked on frontend, backend logic, and database-driven features.

Global Education App

Final Year Project

- Built an application that helps students explore international universities, courses, and scholarship opportunities, with an integrated database for efficient data management.
